RAVENOL STAND-UP POUCHES FOR OIL IN 1L AND 4L SIZES

These pouches, which are often referred to as doypacks, boast typical RAVENOL carbon design features. The pouches consist of several layers of bonded plastic film, which protect the contents from environmental factors while simultaneously preventing leaks. They are also equipped with a cap with a tamper-proof closure which provides assurance that the pouch is filled with an authentic RAVENOL lubricant. During the implementation phase of the RAVENOL oil bags only the following varieties are available (in addition to our already well-known containers in 1L + 4L bags):
